Elekta Versa HD is versatile to deliver conventional radiotherapy as well as has a greater access to advanced treatment options such as Stereotactic Radiotherapy (SRT) and Stereotactic Radiosurgery (SRS).

# Advantages:

High intrinsic accuracy

Image internal structures at any table angle.

Compact dose wrapping around the targeted tumour and less radiation exposure to healthy tissues surrounding the tumour.

Very useful to guide Deep Inspiration Breath-Hold (DIBH) where the patient hold their breath while radiation is delivered.

Shorter delivery time up to 73 percent for SRT/SBRT treatment.

The patient's position can be monitored throughout the whole treatment fraction so that shifts can be observed and accounted for quickly.

The dose can be limited to the heart and lungs for Deep Inspiration Breath-Hold (DIBH) technique.

Delivery of high dose rate up to 4 times faster than the conventional radiation beam.

Able to see local deviation in areas without skin marks, increasing the accuracy within the treatment region.

It is a Surface-Guided Radiation Therapy (SGRT) with 3D camera technology to track the patient's skin surface (C-RAD optical surface guided imaging to facilitate patient setup).

Accurate visualization of the target at the time of treatment and advanced motion management with Image-Guided Radiation Therapy (IGRT) 4D Symmetry and CRAD Catalyst.

Maintain precision of the initial set up throughout the treatment session.

Up to 8 percent more accurate in dose algorithms.
